Guidance on the use of bicycle computers by riders in Lee Valley VeloPark track sessions.

Accredited riders are permitted, at the coach's discretion, to have a bicycle fitted cycling computer, or power meter head unit, such as SRM and/or Garmin.

- Units may only be fitted to rider's own bike, not to Lee Valley VeloPark hire bikes.
- Units must be fitted in a manner where they are mechanically secured to the bicycle and the display is not visible to the rider, or any riders behind them. (under seat mounted displays must face sideways so the riders behind cannot be distracted).
- Units must be silent and not produce any beeps whilst on the track or safety zone.
- Units must not be carried in pockets or attached to body, helmet or clothing.
- Riders may only check displays and operate the units whilst in the track centre.
- If the coach in charge is not satisfied by the attachment of any unit, or the operation of it by any rider, then the use of cycling computers may be prohibited for the entire session.
